

APPENDIX G

US Ser. No. 10/568,264

NCBI Gene database entry for MAFB

The screenshot shows the NCBI Entrez Gene search results for the gene MAFB. At the top, there is a search bar with the word "Gene" and a "Search" button. To the right of the search bar are links for "Save search", "Limits", "Advanced search", and "Help". Below the search bar, the gene name "MAFB" is displayed in bold. Underneath the gene name, the official symbol and name are listed as "Official Symbol MAFB and Name: v-maf musculoaponeurotic fibrosarcoma oncogene homolog B (avian) [Homo sapiens]". Other aliases listed include "KRML" and "MGC43127". The "Other Designations" section includes "Kreisler maf-related leucine zipper homolog; MAFB/Kreisler basic region/leucine zipper transcription factor; OTTHUPO00000031698; transcription factor MafB". The "Chromosome" section indicates "20", and the "Location" is "20q11.2-q13.1". The "Annotation" section notes "Chromosome 20, NC_000020.10 (39314515..39317876, complement)". The "MIM" number is listed as "608968". There is also a link to "Order cDNA clone".
